Fal(s)-(x) / Fa(s) / Ua(s) freight wagons

The 418V wagon was constructed by OBRPS in Poznań in 1975 and produced in many varieties by Zastal Zielona Góra in the years 1977-1992.

This four-axle dump car type 418V is designed for the transport of loose materials and aggregates. Unloading can be carried out on both sides by tilting the box with the help of pneumatic cylinders (2 cylinders on each side). When the body is tilted, the mechanism opens the side door, which causes the transported material to spill out by gravity. After unloading, the cylinders tilt the box back to the transport position.

The 418V is a typical wagon of railway construction in many countries. Apart from Poland, they were exported to Czechoslovakia and Hungary. Nowadays they can be seen working in many other countries including Germany operated by various private railways.

The model consists of 77 parts and is produced with two different front walls and two different bogies. The main frame and the pneumatic cylinders are made of metal as there was no space to hide a metal ballast.

ALBERT MODELL

About us

The history of our company

Established in 2014, Albert-Modell has swiftly emerged as a known name in the world of model railway manufacturing. Our international presence, which commenced in 2017, marks a significant milestone in our journey. At Albert-Modell, our primary focus rests on producing exquisitely detailed models of Eastern European freight wagons, alongside an impressive range of diesel locomotives, but our range includes more and more models from countries like Germany and Switzerland.

Our philosophy is anchored in the belief that model-making is an art that demands precision, detail, and affordability. We strive to blend these elements, offering our clients high-quality, intricately designed models at a price that respects their passion and investment in this hobby.

Our products are crafted not merely as toys, but as collectibles, with a dedication to craftsmanship.

We pride ourselves on producing models in limited quantities, ensuring that each piece we create is not just a model but an elegant representation of the original. This approach underlines our commitment to quality over quantity, making our models sought-after items for collectors and enthusiasts who value exclusivity and authenticity.
